SUMMARY

Motivated and detail oriented engineering graduate specializing in Artificial Intelligence and Machine Learning with hands on experience at startup environment. Proven expertise in fine-tuning (LLMs) with (RAG) and (MCP) techniques enterprise level. Adept at driving innovative AI projects from concept to deployment, utilizing advanced frameworks and tools. Eager to leverage technical skills, startup agility, and a results - focused mindset in a dynamic professional role as a fresher AI/ML Engineer.

EXPERIENCE

AI Engineer Intern

Bangalore, India

Fintech Insights (Enterprise Startup Level)

- Fine-tuned large language models (LLMs) to enhance language understanding and response capabilities for enterprise fintech applications.
- Designed and implemented Retrieval-Augmented Generation (RAG) frameworks to improve information retrieval and context-aware responses.
- Developed and deployed forecasting models (SARIMA) to predict financial trends using historical data, supporting business decision-making.
- Created a custom chat assistant tailored to the company's needs, streamlining internal operations and client communication.
- Gained direct exposure to startup workflows, rapid experimentation, and cross-functional team collaboration.

EDUCATION

High School	Don Bosco high School (GPA: GPA: 8.5)	Mar - 2019
Intermediate	Vidwan Junior College (GPA: Percentage: 60)	Feb '19 - Mar '21
B.Tech	Vaagdevi Engineering College (GPA: Percentage: 7.2)	Feb '21 - Jul '25

PPROJECTS

1.Multi AI Agents Workflow

[Repo Link](#)

Python, Langraph, LLM and Langchain

- Built a multi-agent AI system for complex query breakdown and efficient task coordination.
- Integrated multiple models and a web interface for seamless enterprise workflows.

2.Railway Sentry AI

[Repo Link](#)

Sensors, Open CV and RoboFlow

- Developed an AI-powered system that uses sensors to monitor railway tracks and stations for safety and security.
- Automatically detects Workers and unauthorized activities to prevent accidents and improve maintenance and send Alerts.

3.Fetal Health Predictor

[Repo Link](#)

Machine Learning and Healthcare

- Built an AI system that analyzes prenatal data to predict fetal health risks.
- Enables early detection of issues, supporting timely interventions and improved prenatal

SKILLS

Machine Learning	MLOps, Supervised Learning, Unsupervised Learning, Reinforcement Learning.
Artificial Intelligence	GenAI, Langchain, Langraph, RAG , MCP , N8N, Hugging Face Transformers .
Programming Languages	Python, Flask, Java ,HTML, CSS, react.js, C, Streamlit.
Data Management	Mango DB , DSA.
